ANTHROP\C

Lakshya Singh

ANTHROPIC TIMELINE

2019
OpenAI restructures from a non-profit to a capped-profit entity, and receives a $1 billion investment from Microsoft

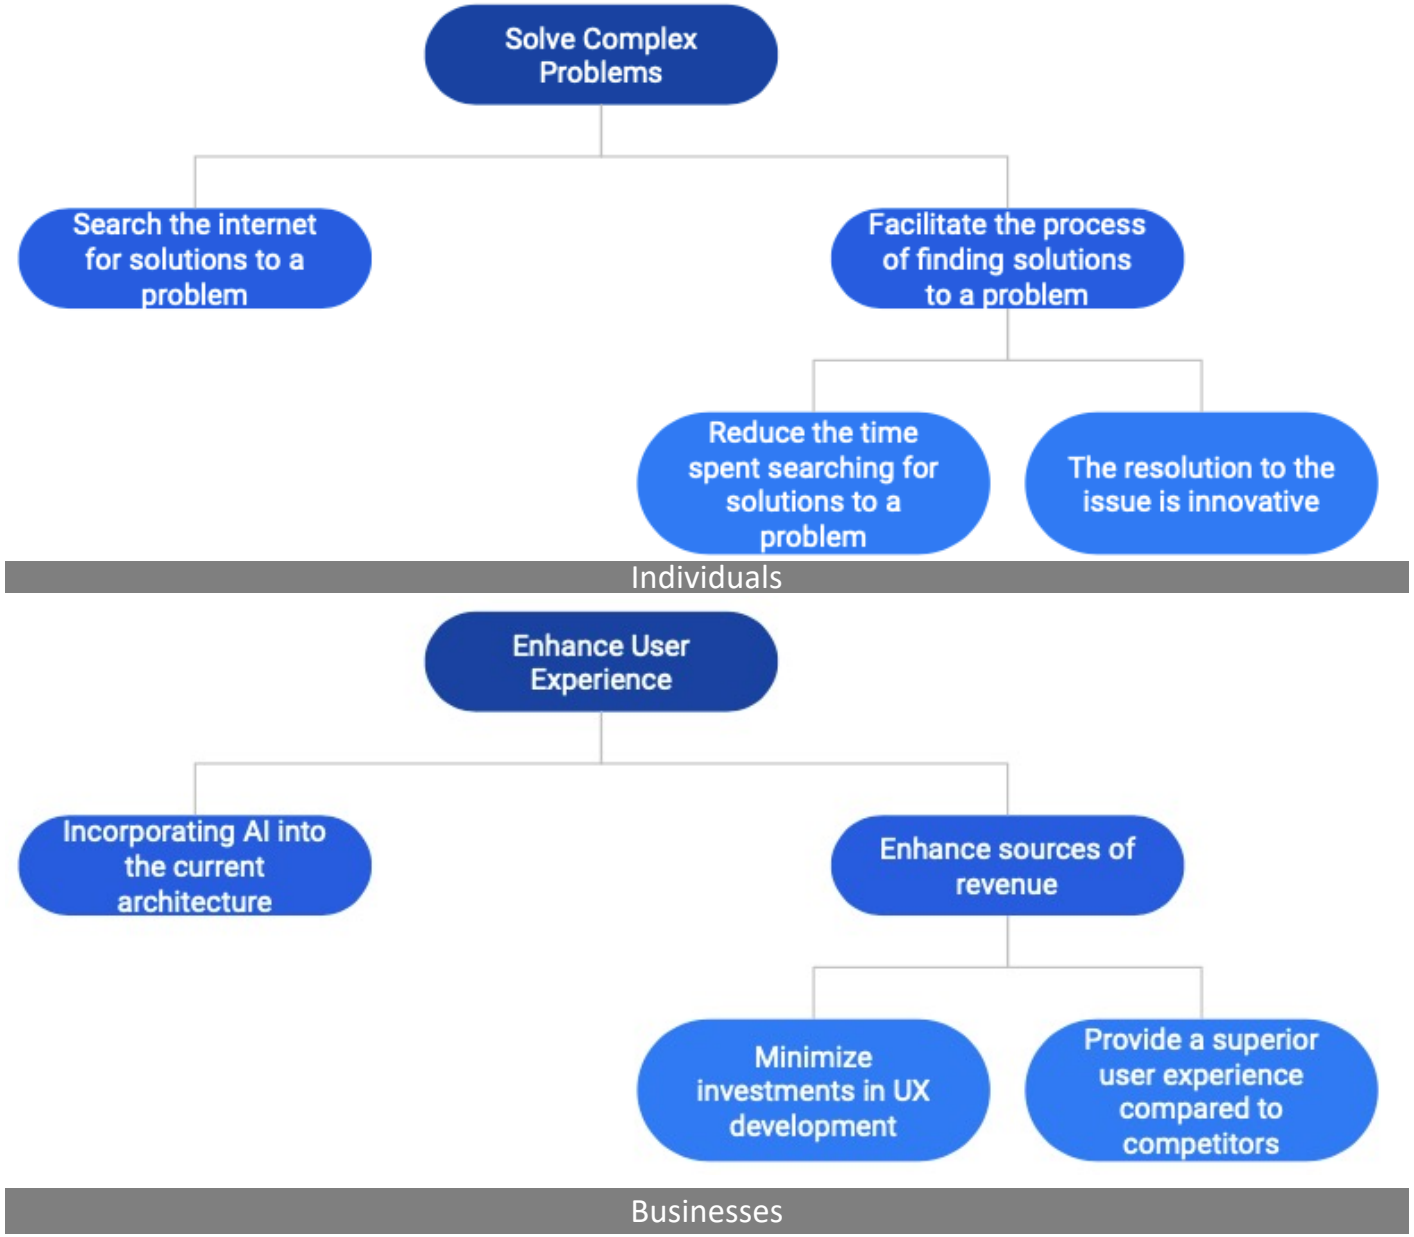
2020
Dario Amodei leaves OpenAI, along with 14 other researchers, to start Anthropic

2021
Anthropic is officially founded by Dario Amodei and Daniela Amodei

2022
Anthropic releases Claude, its flagship AI assistant, in a closed alpha and introduces the concept of Constitutional AI, a method to train models with embedded ethical principles.

2023
Anthropic launches Claude for public use in the UK and US via a limited-access API and also releases Claude 2

Jobs To Be Done



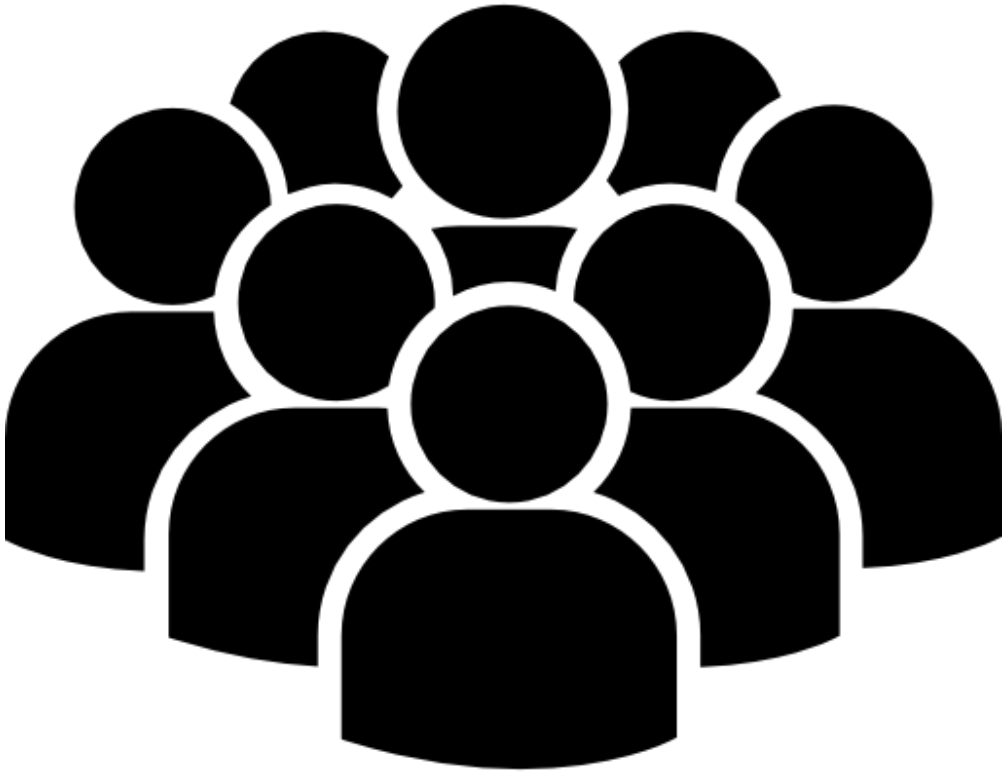
Competitors

Adjacent	Insurgent	Incumbent
Megaturn - Turing NLG from NVIDIA	Google BARD	DuckDuckGo
Amazon Alexa	IBM Watson	Google Search
Meta OPT	Sparrow from Deepmind	Microsoft Bing
Google LaMDA, PaLM, BERT	Baidu	
Microsoft T-NLG	ChatGPT	

External Issues That Threaten Anthropic’s Existence

Social

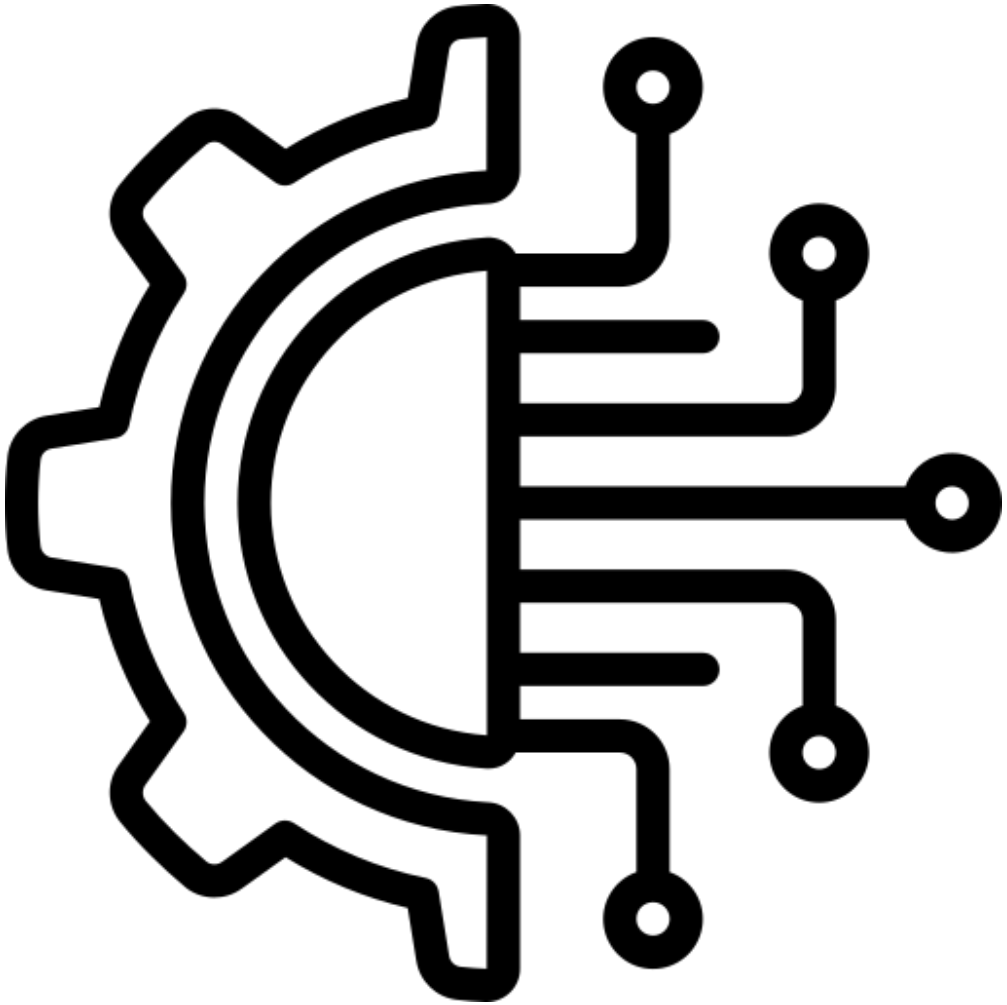
- Growing concerns about AI safety and ethics could impact Anthropic's funding, public support, and talent acquisition.



External Issues That Threaten Anthropic's Existence

Technological

- Rapid AI advancements in deep learning and other AI fields can offer both opportunities and challenges for Anthropic.
- Access to computing resources is crucial and changes in pricing or availability could affect Anthropic's progress.



External Issues That Threaten Anthropic's Existence

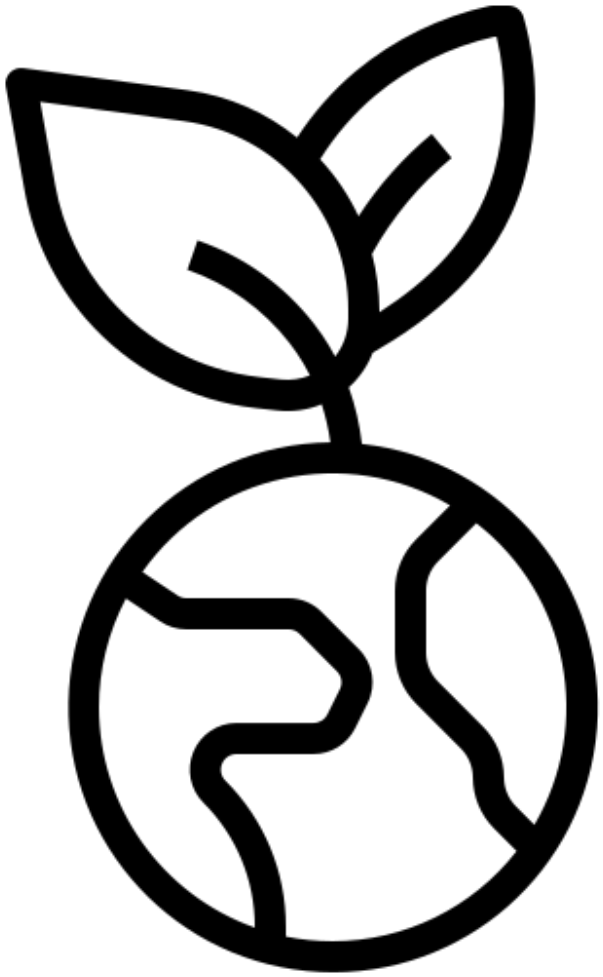
Economic

- Secure funding and partnerships are key for sustainability and growth and changes in economic landscape or investor priorities could affect this.
- Commercializing safe AI opens revenue streams but requires ethical concerns to be addressed.

External Issues That Threaten Anthropic's Existence

Environmental

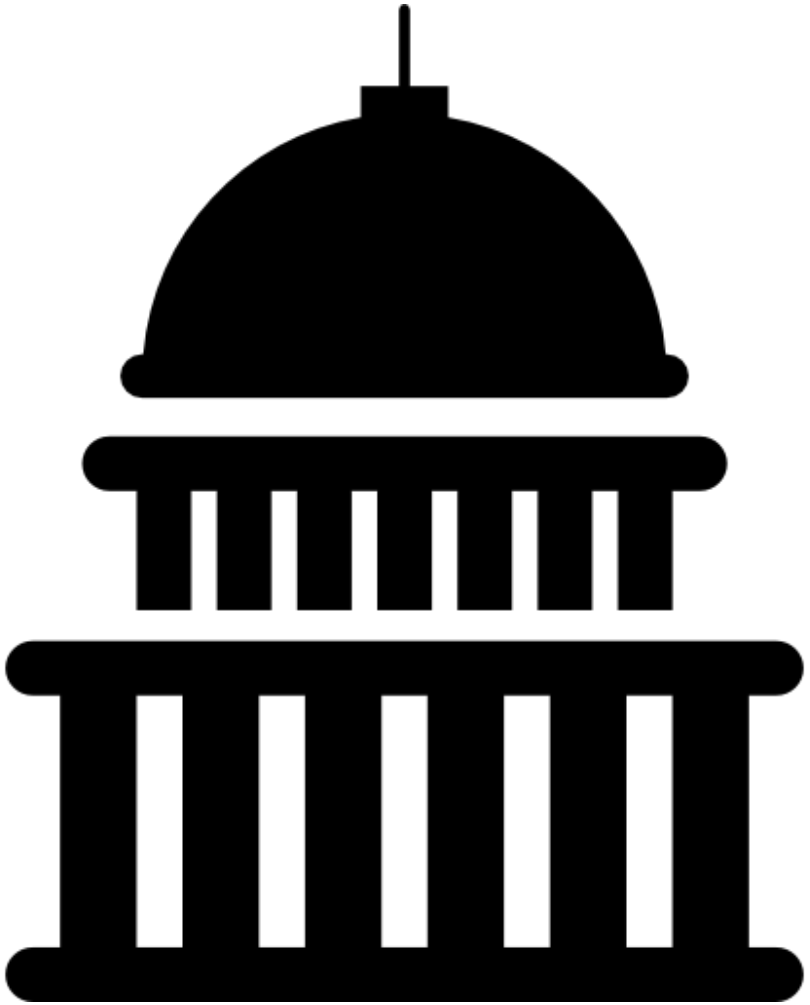
- Sustainable computing practices are becoming increasingly important and can force Anthropic to focus on efficiency of its models.
- Climate change can affect data collection and model training.



External Issues That Threaten Anthropic's Existence

Political

- AI regulations can significantly impact research and commercialization.
- Geopolitical landscape can limit partnerships, data access, and collaborations.



Analyzing Drivers to Increase Opportunities, Minimize Threats, and Strategize

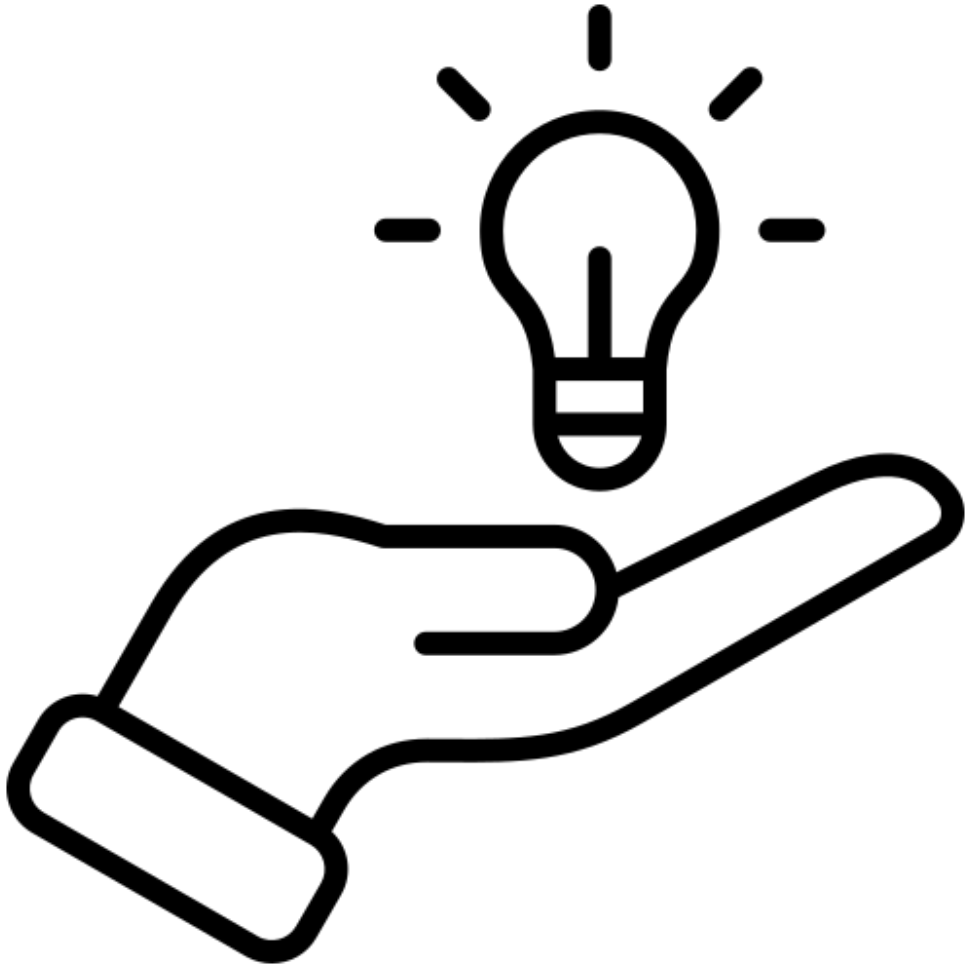
Drivers

- The presence of bias in training data can lead to unintended discriminatory outcomes.
- Bing and Bard provide real-time search results, enhancing user experience.

Analyzing Drivers to Increase Opportunities, Minimize Threats, and Strategize

Opportunities

- As customer behavior evolves, there is a noticeable shift from mere search queries to a preference for platforms that provide comprehensive explanations.
- Establishing diverse revenue streams.



Analyzing Drivers to Increase Opportunities, Minimize Threats, and Strategize

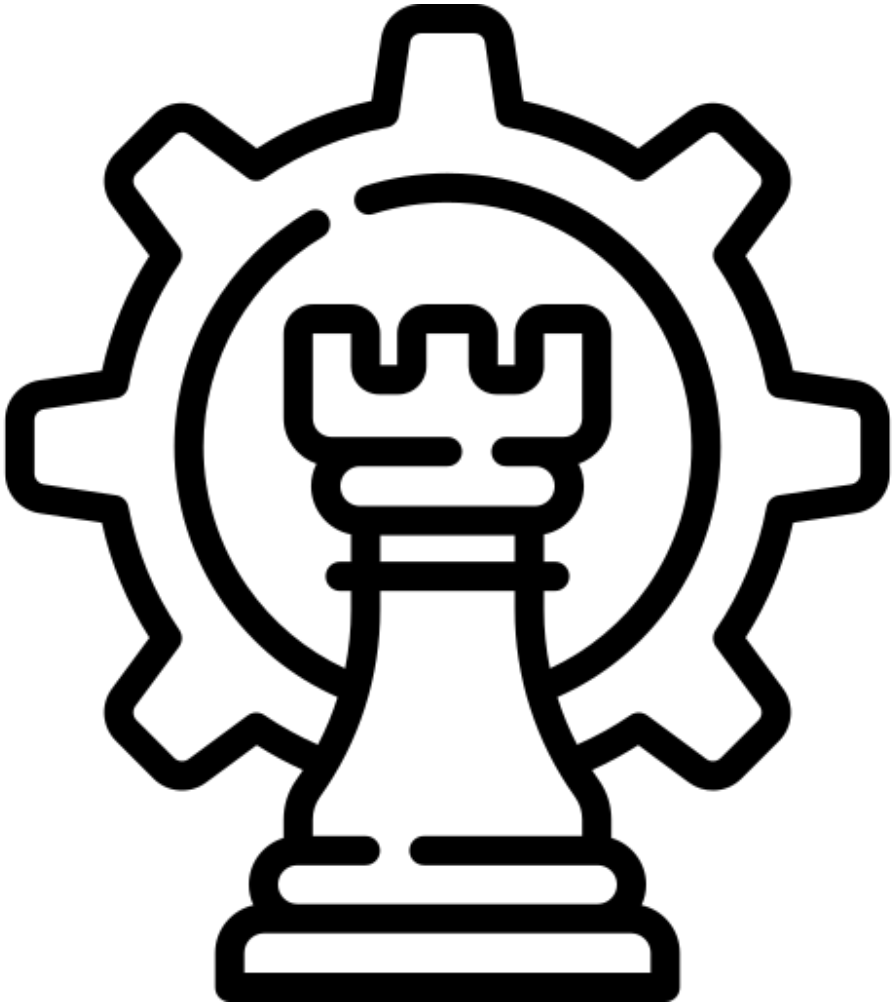
Threats

- Hackers could steal training data, exposing sensitive information or manipulating the model's outputs.
- LLMs might generate outputs that inadvertently reveal private information about individuals in the training data.
- Emerging participants in the AI sector can squeeze Anthropic’s market share.

Analyzing Drivers to Increase Opportunities, Minimize Threats, and Strategize

Strategic Response

- Connecting Claude to the web for real-time responses
- Integrating APIs with services
- Launching Claude mobile application



Key Partners

- Amazon
- Google
- Alignment Research Center (ARC)

Key Activities

- Output in the form of text.
- Training a constitutional AI model.

Key Resources

- Claude Instant
- Claude 2.0
- Claude 2.1
- Constitutional AI

Value Propositions

- The output transitions from mere searching to providing explanations.
- Personalised results
- Experience human-like conversational responses.
- Data privacy and security

Customer Relationships

- E-mail

Channels

- Website

Customer Segments

- Gen Z and Millennials
- Universities
- Research Institution
- NGOs and Govt. organizations

Cost Structure

- Salaries of employees and operating expenses.
- Data storage.
- Model training

Revenue Streams

- Claude Pro Subscription
- API fees

Business Model Canvas

How Should Anthropic Plan Their Growth Across 3 Time Horizons?

Horizon 1 [0-1 year]	Horizon 2 [1-3 years]	Horizon 3 [3+ years]
Focus on Core Issues • Mobile Application • Connecting Claude to the web for real time responses.	**Focus on Emerging Issues** • Integrating API with various services. • Making Claude multimodal.	**Focus on New Issues** • Collaborating with educational institutes • Removing Claude Pro usage limit and increasing Claude usage limit.

Horizon 1 [0-1 Year]

Recommendations

- Introduce Claude mobile app seamlessly integrating with leading e-commerce and transport apps. Compare prices, forecast costs, and discover potential savings, putting valuable opportunities at the fingertips of users.
- Bing and ChatGPT already offer such capabilities and users may switch if they get a better user experience.

Horizon 2 [1-3 Years]

Recommendations

- Generate sustainable revenue by selling licenses through the monetization of API integrations and SDKs.
- Broaden the platform's capabilities to handle diverse input and output forms, enhancing applications such as image and voice explanations.

Horizon 3 [3+ Years]

Recommendations

- Apart from human involvement in refining Claude, Anthropic introduced another AI model known as Constitutional AI.
- Geared towards discouraging toxic, biased, or unethical responses while maximizing positive impact, Constitutional AI incorporates guidelines inspired by the United Nations' Declaration of Human Rights and Apple's terms of service.
- This makes Claude more suitable to be used by educational institutions to help teachers and students than its competitors.
- It can also be used by enterprises internally to help their employees and can be trained on a company’s internal data.
- Remove usage limit on Claude Pro and increase usage limit on Claude since competitors offer unlimited messages.
